8/25/2026 22:00:07	saif2107017@stud.kuet.	2107017	My Smart Study Room — An Interactive 3D OpenGL Scene	My Smart Study Room is a 3D OpenGL project featuring a study table, laptop, chair, ceiling fan, lamp, window, and wall clock. It demonstrates translation, rotation, scaling, projection, and lighting, with animated elements such as a rotating ceiling fan and moving clock hands.
8/25/2026 22:00:17	soraeshan6@gmail.com	2107030	3D Solar System	3D Solar System
8/25/2026 22:00:23	ruhansarnav09@gmail.c	2107025	Campfire Forest Night: A Dynamic 3D Nighttime Scene using OpenGL	
9/9/2026 16:18:18	rahman2107062@stud.k	2107062	3d classroom + Academic Zone [1]	A procedurally generated 3D classroom scene built from scratch in modern OpenGL, featuring realistic lighting and materials, animated elements like a spinning fan and a hinged door, and a full range of 3D transformations
8/25/2026 22:00:29	asif.jawad.aj15@gmail.c	2107007	Interactive 3D Traffic Intersection Road Simulator	An interactive OpenGL-based 3D traffic intersection simulator that demonstrates real-time vehicle movement, traffic signal control, smooth acceleration and braking using sigmoid-based motion, multiple camera views, and dynamic day–night transitions. The project uses 3D transformations, perspective viewing, ambient/diffuse/specular illuminat
9/15/2026 12:58:13	datta2107047@stud.kue	2107047	Dheki — the foot-powered rice husker [2]	The project is a real-time OpenGL scene of a traditional foot-operated rice husker (dheki) working in a village courtyard. Most people recognise a dheki from photographs but have never seen why it works: a person presses down on the long end of an unevenly balanced beam, which lifts a heavy pestle at the short end and drops it into a mortar bow
8/25/2026 22:00:31	sifatul.islam.onik@gmail	2107016	Sewing Machine	A single garment-factory sewing machine head on a work table, seen close. The balance wheel turns, the needle bar drives up and down through the fabric, the presser foot holds, the feed dog advances the cloth one stitch at a time, and the thread spool slowly shrinks.
8/25/2026 22:00:32	rezwanahammad68@gm	2107072	Digital Art Gallery	Digital Art Gallery is a minimal interactive indoor environment developed using OpenGL. The scene will consist of a gallery room, wall-mounted digital artworks, display pedestals, abstract digital sculptures, an entrance door, and ceiling lighting, with all objects constructed from unit cubes and spheres without using precomputed 3D models. Transl
8/25/2026 22:00:32	ishratbinteahmed@gmail	2107019	Amusement Park	A 3D amusement park scene built with PyOpenGL, featuring multiple animated rides (Ferris wheel, carousel, swing, coaster) with realistic motion, multi-light Phong shading for a day/night atmosphere, and a free-fly camera for interactive exploration.
8/25/2026 22:00:32	sayeem192058@gmail.c	2107033	3D Animated Car Simulation with Transformations and Lighting	A 3D OpenGL-based car simulation where the car moves along a road and its wheels rotate continuously. The project demonstrates 3D translation, rotation, scaling, and shearing, along with lighting, day/night effects, camera movement, and animation.
8/25/2026 22:00:33	husain2107029@stud.ku	2107029	3D Robotic Insect Motion Simulator	A 3D OpenGL simulation of a robotic insect following mathematical motion trajectories through a responsive natural environment, with dynamic orientation and multiple camera views.
8/25/2026 22:00:34	niloy2107028@stud.kuet	2107028	PUBG Pochinki City: 3D Interactive Simulation Using OpenGL	A 3D interactive recreation of Pochinki City from PUBG, developed using OpenGL. The project will recreate the city's buildings, roads, terrain, and surrounding environment, along with interactive player and object movements inspired by the game. It will demonstrate linear motion through player movement, vehicle movement, bullet/projectile movem The project will incorporate the major topics covered in the Graphics Laboratory, including OpenGL primitives, 2D and 3D transformations, coordinate systems, camera/view space, orthographic and perspective projection, viewport transformation, lighting and illumination (ambient, diffuse, and specular), shading, texture mapping, texture filtering ar
8/25/2026 22:33:27	mdjahid205hasan@gmai	2107054	Horror House at Night [4]	An abandoned house at night built in OpenGL, where four light types combine naturally — a hanging bulb (point), moonlight casting long shadows (directional), a moving flashlight (spot), and soft window light (area). Fog, dynamic shadows, and objects like old furniture, trees, rocks, and a broken door create a cinematic horror atmosphere that clea
8/25/2026 22:00:35	himel2107032@stud.kue	2107032	3D Port Cargo Loading & Unloading Simulation	An OpenGL/C++ 3D simulation of a container port, featuring a hierarchically-animated crane (rotating tower, sliding trolley, extending cable) that loads and unloads cargo containers between a ship and the storage yard. Includes Phong lighting, distinct materials/colors, and a free/orbit camera, demonstrating hierarchical transformations and real-ti
8/25/2026 22:00:40	islam2107051@stud.kue	2107051	3D Black Hole Visualization with Dynamic Lighting	This project creates a simple 3D visualization of a black hole with a rotating accretion disk, orbiting particles, and a starry background. It demonstrates 3D transformations, interactive view coordinate controls, and different lighting techniques including point light, directional light, and spot light.
8/25/2026 22:04:53	rohan2107018@stud.kue	2107018	Windmill Farm: A 3D Countryside Scene with Nested Rotational Hierarchies in OpenGL [6]	Description: A small 3D countryside scene featuring windmills with nested pivot animation — the head yaws to follow the wind while the blades spin independently at their own pivot — alongside a house and rotating water wheel. Lighting combines directional sunlight, point lights from windows, and a spot light on the windmill base, viewed through
8/30/2026 21:09:56	hoque2107077@stud.ku	2107077	Beach Day: A Full Sunrise-to-Sunset Coastal Scene in OpenGL [8]	A calm 3D beach where a person sits under an umbrella and a small boat drifts on the sea, shown across a full sunrise-to-sunset cycle. The sun moves as a directional light, sweeping and stretching the shadows of the umbrella, palms, person, and boat while its color and intensity shift through the day. It demonstrates translation, rotation, and scal
8/25/2026 22:03:38	kazirifatalmuin246@gma	2107042	3D Target Shooter [10]	A simple shooting game where the player aims at targets placed around a small arena. Targets can move or appear at different positions. [11]
8/25/2026 22:17:16	f.tahmid123@gmail.com	2107059	3D Construction Site [12]	A construction environment containing tower cranes, excavators, dump trucks, elevators, and partially completed buildings. The project demonstrates hierarchical transformations, arbitrary-axis arm rotation, object translation, vector alignment, coordinate conversion, perspective and orthographic views, shadows, and multiple illumination models.
8/25/2026 22:01:06	sayeedbinomar27@gmai	2107053	AQUA-BOT: A 3D Underwater Exploration Simulator	AQUA-BOT is an interactive OpenGL application where users control an underwater robot to explore a 3D ocean environment and navigate around obstacles. The project includes a simple hierarchical robot, multiple camera views, Phong lighting, underwater fog, propeller animation, and basic collision detection.
8/25/2026 22:01:06	das2107021@stud.kuet.	2107021	Moving staircase	Moving staircase inspired by Harry Potter
8/25/2026 22:03:53	offa2107087@stud.kuet.	2107087	Interactive 3D Automobile Service Garage with Dynamic Lighting and Phong Shading	This project aims to develop an interactive 3D automobile service garage using OpenGL, where a complete vehicle maintenance scene will be simulated. A car will enter the garage, move onto a hydraulic lift, undergo inspection and wheel servicing, and finally leave after the maintenance cycle is completed. The scene will include multiple animated objects such as the car, hydraulic lift, garage shutter, wheel-balancing machine, rotating wheel, inspection lamp, and ceiling fan. Curved and procedurally generated objects will be used along with texture mapping, multiple materials, dynamic shadows, and hierarchical transformations. Different lighting and shading techniques, including ambient, diffuse and specular illumination, directional light, point light, spotlight, attenuation, and Flat/Gouraud/Phong shading, will be implemented so that their visual effects can be interactively demonstrated. Basic Flow: Car Arrival → Garage Door Close → Vehicle Lift → Inspection → Wheel Removal → Wheel Balancing → Wheel Replacement → Vehicle Lowering → Final Check → Car Departure → Service Complete → Restart [14]
8/25/2026 22:01:16	khan2107034@stud.kuet	2107034	Car Looking Glass: Dynamic 3D OpenGL Snow Scene	An OpenGL/C mini-project featuring an autonomous 3D car navigating a dynamic snowy forest environment. Built using composite transformations, the application integrates realistic material lighting coefficients with toggleable directional lights and spotlights that cast dynamic per-light ground shadows. A secondary camera mounted on the vehi
9/9/2026 1:18:52	alif2107090@stud.kuet.a	2107090	3D Observatory Simulator [15]	The scene is a complete observatory building at night: a domed chamber containing a telescope mounted on a two-axis mount. The user can open the dome slit, rotate the telescope in azimuth and elevation, and activate a tracking mode where the telescope automatically follows a moving star across the sky. The project demonstrates hierarchica
8/25/2026 22:01:27	nirob2107092@stud.kue	2107092	Interactive Coastal Lighthouse with Dynamic Lighting and Phong Shading	A simple 3D coastal lighthouse scene inspired by Bangladesh's cyclone-prone coastline. The lighthouse will have a continuously rotating beacon that sweeps a spotlight across the sea and nearby boats. The project will demonstrate 3D object creation, translation, rotation, scaling, composite and hierarchical transformations, ambient/diffuse/spec
8/25/2026 22:01:30	rafsanishazid@gmail.co	2107022	Interactive Space Station Simulator Using OpenGL	Develop an interactive space station simulation using OpenGL, where the station and its components are created using basic geometric primitives and transformation matrices. The project will include movable and animated objects such as a docking spacecraft, rotating solar panels, a robotic arm, opening docking doors, an orbiting satellite, and
8/25/2026 22:01:38	saha2107079@stud.kuet	2107079	ChessCraft 3D — Procedural Geometry & Real-Time Lighting Simulation	An interactive 3D chess visualization built using Modern OpenGL . The chessboard and all 32 chess pieces are procedurally generated from basic geometric primitives using custom generator functions. The project demonstrates hierarchical transformations (scripted piece-movement animation), Phong illumination (Ambient, Diffuse, Specular) wit
8/25/2026 22:01:40	tasnim2107082@stud.ku	2107082	3D Helicopter Simulation	A 3D helicopter model consisting of the main body, rotor, tail rotor, landing gear, cockpit, and other components. The helicopter will demonstrate 3D transformations and animation through flying, rotation, pitching, and landing movements. Lighting and shading techniques will be applied to improve the visual appearance and demonstrate realistic ill
8/25/2026 22:01:41	zunaiednudar1324@gma	2107041	3D Maze Explorer	A 3D visualization of a maze environment that demonstrates 3D modeling, transformations, camera movement, lighting, rendering, and spatial visualization. Users can navigate the 3D scene to explore the maze structure.
8/25/2026 22:01:43	sharma2107005@stud.k	2107005	Interactive Player and Ball Movement in a Futsal Field	This project presents a simple interactive 3D futsal environment designed to demonstrate fundamental computer graphics concepts. The user can control a player to move around the field, turn in different directions, dribble a ball, and kick it. The ball performs both translational and rotational motion while moving.
8/25/2026 22:01:43	akter2107080@stud.kuet	2107080	Interactive 3D Bowling Alley Simulation	A simple interactive 3D bowling alley scene built in OpenGL. The scene consists of a bowling lane, a rolling ball, and a triangular formation of 10 pins. The ball travels down the lane with combined translational and rotational motion (rolling), and on contact, pins topple by rotating about their base along a dynamically computed fall axis. The scene i
8/25/2026 22:01:48	mehereen2107039@stuc	2107039	Moonlit Lake: An Interactive Lakeside Cabin and Hidden Treasure Cave	A small interactive 3D night scene featuring a moonlit lakeside cabin, animated water, clouds, and a campfire. The user can explore the environment and enter a nearby cave containing glowing crystals and sparkling treasures. The project will contain 3D transformations, lighting, animation, camera navigation, and basic collision detection.
8/25/2026 22:01:50	void2k03@gmail.com	2107099	Interactive 3D Mini Café Design and Table Arrangement	This project aims to create an interactive 3D café environment where users can visualize and arrange café furniture and objects. The scene will include simple objects such as tables, chairs, counters, cups, lamps, and decorative items. Users will be able to select objects and apply 3D transformations, including translation, rotation, scaling, and com
8/25/2026 22:13:17	hmazrof@gmail.com	2107088	Interactive 3D Robotic Surgery Suite with Articulated Kinematic Manipulators and Multi-Source Endoscopic Illumination F	[18]
8/25/2026 22:02:26	das2107060@stud.kuet.	2107060	3D Anime Ramen Shop	A simple interactive 3D ramen shop simulation where users can explore the scene, manipulate objects, and view different lighting and material effects. The project demonstrates basic Computer Graphics concepts such as 3D transformations, viewing coordinates, perspective projection, white-light illumination, dielectric materials, object manipulat
8/25/2026 22:03:06	tahsin2107031@stud.ku	2107031	Haunted Toy Room	A short 3D animated cartoon scene set in a child's toy room at night, where the toys mysteriously come to life. A toy car moves around the room while its wheels rotate, a ball rolls across the floor, and a toy robot wakes up and interacts with the other toys. A desk lamp flickers and illuminates the scene, creating a transition from a dark night enviro
9/9/2026 4:12:27	rabby2107086@stud.kue	2107086	3D Virtual Walkthrough of Uni Hall Room 304 (KJAH) [19]	An interactive 3D simulation of a 4-seat university dormitory room built using basic OpenGL primitives (cubes, spheres, cylinders). The project demonstrates complex indoor scene management, artificial indoor lighting (Phong model), and hierarchical animations within a confined, highly detailed space. [20]
8/25/2026 22:03:38	siddiqui2107006@stud.k	2107006	Voyager 1: Journey Beyond the Solar System	A 3D animated visualization of Voyager 1's historic journey from Earth through its encounters with Jupiter and Saturn and onward into interstellar space. The project will animate the spacecraft along its trajectory, including its planetary flybys and change in direction after the Saturn encounter. The scene will use 3D transformations such as translat
8/25/2026 22:03:41	nath2107055@stud.kuet	2107055	Squid Game - Red light Green light	Squid game red light green light game 3d
8/25/2026 22:04:18	joy2107116@stud.kuet.a	2107116	3D Animated Table Fan Using Hierarchical Transformations and Local Illumination	A 3D table fan modeled using basic primitives, featuring rotating blades, side-to-side oscillation, hierarchical transformations, and basic local lighting with Blinn-Phong shading.
8/25/2026 22:05:08	hasan2107074@stud.ku	2107074	Photo Studio	A 3d photography studio room with dynamically adjustable lighting and various moving devices and objects that can be placed for photography.
8/25/2026 22:05:18	chowdhury2107038@stu	2107038	Jovian system visualization	A 3D visualization of a hierarchical orbital system — Jupiter and its moons orbiting the Sun, which itself orbits the Milky Way's galactic core. Journey from galaxy to gas giant and its six unique moons.
8/25/2026 22:05:27	sabithbinfarid2026@gma	2107091	Haunted House at Night	
9/4/2026 11:33:56	hasan2107064@stud.ku	2107064	Moonlit Village Gathering – A Rural Night Scene in 3D [21]	A procedurally-generated 3D scene set in rural Bangladesh at night. A family sits on a woven charpai under a bright full moon. Parents are chatting and fanning themselves with a handmade fan; children run around playing “লুকোচুরি” (hide-and-seek); older siblings sit reading and reciting a Bengali poem. Fireflies (জোনাকি পোকা) hover nearby. All objects
8/25/2026 22:05:47	enam-e-elahi2107012@s	2107012	Night Delivery	An interactive 3D scene where vehicle travels through a nighttime to deliver a package in different lighting condition
8/25/2026 22:06:12	chowdhuryniloy819@gm	2107117	Animated 3D Farm Scene with Lighting and Transformations	A simple 3D farm environment developed using OpenGL, containing a farmhouse, trees, crops, tractor, windmill, and other basic elements. The project demonstrates translation, rotation, and scaling through animated objects such as a moving tractor, rotating windmill, and moving clouds. Basic lighting techniques are used to simulate natural outdo
8/25/2026 22:11:13	poran2107056@stud.kue	2107056	AMS Agro Farm – Interactive 3D Farm Visualization	A modern OpenGL-based 3D agro-farm simulation featuring an explorable environment, animated livestock and workers, realistic day-night lighting, interactive farm activities, multiple camera views, texture mapping, and collision-aware navigation. There will be cows, calfs, workers, chickens , hens etc. which shows the demo of a regular agro base
8/25/2026 22:10:06	nurealamsiddikiprince@g	2107110	KUET Campus Mini Scene	Gate, road, trees, moving bus/students. [24]
9/16/2026 21:26:14	soykot2107100@stud.ku	2107100	Matsuri Nights — A Japanese Festival Street [25]	A real-time 3D recreation of a traditional Japanese summer street festival (matsuri), rendered with both daylight and nightlight lighting modes. The scene features a row of Japanese-style wooden machiya buildings lit by swaying paper lanterns, a torii gate, cherry blossom trees, and a lively crowd of yukata-clad visitors walking between food stalls
8/25/2026 22:08:36	ghosh2107109@stud.ku	2107109	VolcanoX - A Real-Time Volcanic Eruption Simulation in OpenGL	This project simulates a simplified volcanic eruption using OpenGL, focusing on hierarchical model transformations and Phong illumination rather than visual spectacle alone. A volcano continuously ejects lava fragments that follow true projectile motion under gravity, arcing outward and falling back onto the slope, while a slow lava flow descends
8/25/2026 22:11:10	siraz2107068@stud.kuet	2107068	Firefighter Rescue Simulator	A 3D emergency scene where a fire truck arrives at a burning building, its ladder extends, a firefighter climbs the ladder, and a water hose sprays toward the building. It demonstrates transformations, lighting, and camera control.
8/25/2026 22:13:11	hasan2107004@stud.ku	2107004	"Broadside": An Age-of-Sail Naval Gunnery Duel	A single warship rides a live wave surface and duels a patrolling enemy vessel with a two-axis aimable cannon firing true parabolic projectiles, presented as a rigid-body hierarchy and ballistics demonstration that happens to be set in the age of sail.
8/25/2026 22:13:45	ahona9168@gmail.com	2107093	3D Windmill Scene with Dynamic Lighting & Transformation	A real-time 3D interactive scene featuring a windmill, terrain, and simple rural elements to demonstrate fundamental computer graphics concepts.
8/25/2026 22:16:36	ahmed2107001@stud.ku	2107001	Pottery Wheel - A Spinning Legacy [27]	An OpenGL scene of a foot-powered potter's wheel where a physically-driven spin (kick, then friction decay) shapes a glossy clay pot under a single overhead light, using the moving specular highlight to make Phong shading and material contrast between wet clay and matte wood unmistakably visible.
8/25/2026 22:16:24	sakin2107103@stud.kue	2107103	Late Night Coding Environment	A simple interactive 3D scene showing a student coding on a laptop at a study table in a dark room at night. The scene includes a study table, chair, laptop with a coding screen, a desk lamp for focused light, bookshelf with books and essential desk accessories.
8/25/2026 22:26:32	islam2107044@stud.kue	2107044	Interactive Japanese Landscape Through Four Seasons [28]	An interactive 3D Japanese landscape that dynamically transitions through spring, summer, autumn, and winter, featuring seasonal environments, particle effects, moving objects, dynamic lighting, shadows, and image-processing techniques. [29]
8/25/2026 22:18:49	ariyanspandan@gmail.c	2107045	Race Car Pit Stop Scene [30]	Race Car Pit Stop Scene is a 3D graphics project simulating an race car's pit stop, including car entry, lifting, wheel replacement, lowering, and exit. It focuses on 3D modeling, animation, transformations, lighting, and camera viewpoints to create a realistic pit-stop sequence. [31]
8/25/2026 22:20:04	sultana2107108@stud.k	2107108	3D Aquarium Scene [32]	An interactive underwater 3D scene featuring fish, plants, rocks, bubbles, and required dynamic light sources with real-time transformations and lighting.
8/25/2026 22:25:09	ali2107027@stud.kuet.a	2107027	3D Airport Traffic Control	
9/12/2026 18:21:14	islam2107008@stud.kue	2107008	3D Railway Level-Crossing Simulation [33]	A 3D OpenGL simulation of a railway level-crossing where a train moves along the tracks while its wheels rotate and the barrier gate moves up and down. The project demonstrates translation, rotation, scaling, hierarchical transformation, animation, lighting, and camera control in an interactive real-world scene. [34]
8/25/2026 22:33:07	datta2107070@stud.kue	2107070	3D mini Traffic Scene at night	
8/25/2026 22:34:35	shejan2107009@stud.ku	2107009	Interactive Cave Exploration with Dynamic Phong Lighting	A 3D cave exploration scene featuring a moving robot, dynamic spotlight lighting, and cave environments. The project demonstrates transformations, animation, Phong shading, and ambient, diffuse, and specular lighting.
8/25/2026 22:38:09	nabil2107073@stud.kuet	2107073	Moonlit Window: An Interactive 3D Room Scene using Modern OpenGL	An atmospheric 3D indoor vignette featuring an open window sill overlooking a starry night sky and full moon. The scene contains detailed props including a resting cat with a swaying tail, fairy light string, floor lamp, acoustic guitar, coffee mug, and scattered room accessories.
8/25/2026 22:42:19	alam2107023@stud.kuet	2107023	Aircraft Take-Off Simulation on an Ocean Runway	
8/26/2026 8:57:07	mahhiamim@gmail.com	2107081	NanoVerse: 3D Nanoparticle Drug Delivery Simulation [35]	NanoVerse is an interactive 3D OpenGL visualization of targeted nanoparticle drug delivery inside a microscopic blood vessel. The scene features moving blood cells, nanoparticles carrying medicine, and a target cell where drug molecules are released through animated 3D transformations. The project uses Phong shading with ambient, diffuse, a
8/25/2026 22:48:57	talukdar2107049@stud.k	2107049	3D Bowling Simulator	3D Bowling Simulator with Ball Animation, Collision Detection, and Dynamic Lighting
8/25/2026 22:51:45	das2107118@stud.kuet.	2107118	The Trial of Three Curses	A small interactive 3D mythological chamber containing Anubis's soul-balance scale, a sealed Djinn lamp and a Medusa guardian. A traveller's glowing heart is weighed on the scale. If balanced, the Djinn lamp opens and releases magical energy; otherwise, Medusa awakens and turns the traveller into stone. The OpenGL scene dynamically demons
8/25/2026 23:09:58	zisan2107015@stud.kue	2107015	Neon Genesis: A Procedural 3D Cyberpunk Urban Simulation	This project presents an immersive, high-fidelity 3D cyberpunk cityscape developed using modern OpenGL. The simulation focuses on creating a dense urban environment characterized by high-contrast neon aesthetics and dynamic atmospheric effects.
8/25/2026 23:32:51	hasanideal2002@gmail.c	2107075	Automated 3D Parcel Sorting Station	A simple OpenGL scene where parcels move along a conveyor and a rotating gate sorts them using animated transformations, point lighting, and Phong shading.
8/26/2026 0:05:55	albitahmid@gmail.com	2107107	Interactive 3D Smart Flood Sluice Gate Simulation	This project presents a simple 3D OpenGL simulation of a smart flood-control sluice gate inspired by flood management systems in Bangladesh. The scene will include a dynamically moving gate, rotating control wheel, changing water level, and warning indicators, all animated continuously inside the render loop. It will demonstrate translation, rot
8/26/2026 0:11:47	preom.cc.bd@gmail.com	2107014	Merry-Go-Round	The basic idea is to create a virtual carousel where: The entire platform rotates. Horses/chairs rotate around the center. The horses can move up and down. The roof rotates together with the platform. The user can control the carousel. Camera can view it from different angles. Lights can turn on/off. Speed can be increased/decreased.
8/26/2026 0:37:24	nawer2107089@stud.ku	2107089	3D Surgical Operating Theatre: Dynamic Lighting & Hierarchical Transformations	A 3D OpenGL surgical operating theatre with animated table, rotating instruments and dynamic overhead lighting. Demonstrates hierarchical transformations, 3D animation and Phong illumination with interactive user controls.
8/26/2026 1:09:19	arefin2107065@stud.kue	2107065	Pepper's Ghost: Magician Stage	A simple 3D magician stage with a tilted transparent glass pane. A hidden figure behind/below the stage is reflected through the pane, creating a ghost-like image beside the magician. The scene includes a rotating stage, opening curtain, simple magician animation, and spotlights. The main transformation is reflection across an arbitrary plane, wi
8/26/2026 1:47:25	sheikh2107063@stud.ku	2107063	QuakeGuard 3D	A 3D earthquake simulation that compares two skyscrapers and shows how base isolators and a moving mass damper can reduce building sway.
8/26/2026 9:28:34	islam2107102@stud.kue	2107102	3D Bascule Bridge & River Traffic Simulation	A 3D OpenGL simulation of a drawbridge that dynamically opens for river traffic. The scene features a moving ship and a splitting bridge that rotates upwards from its hinges, demonstrating hierarchical and composite transformations. Translation, rotation, and scaling are applied to the ship and bridge components. The scene includes continuous
8/26/2026 10:46:42	sharif2107002@stud.kue	2107002	3D Angry Bird Simulation with Physics and Collision Detection	This project is a simple 3D Angry Bird-inspired game where the user launches a bird toward objects inside a 3D room. The user can set the pull-back distance, launch angle, and base angle before firing. After launch, the bird moves according to basic physics and gravity. When it hits the ground or another object, it will bounce and gradually lose energy until it stops. The project will also include 3D objects, lighting with ON/OFF control, camera movement, animation, and collision detection. The main purpose of the project is to demonstrate basic 3D graphics, transformations, lighting, animation, and physics in an interactive environment.
8/26/2026 12:27:55	akter2107084@stud.kue	2107084	3D Medieval Clock Tower	The 3D Medieval Clock Tower is a real-time computer graphics project that simulates both the exterior stone architecture and the intricate internal mechanical horology of a historic turret clock.
8/26/2026 15:32:03	nahianzarif.100@gmail.c	2107098	3D Interactive Pinball Machine	An interactive OpenGL pinball simulation featuring a tilted playfield, keyboard-controlled flippers, a spring-loaded plunger, and a physics-driven ball with gravity, rolling motion, and collision-based bounces off walls and bumpers. The project demonstrates hierarchical transformations (flipper pivots, plunger translation), real-time collision detection a
8/26/2026 20:27:06	mollamasum764@gmail.	2107040	3D Cyber Crime Investigation Lab Using OpenGL	A simple 3D digital forensics lab featuring computers, evidence, CCTV, and servers. The project will demonstrate translation, rotation, scaling, animation, and basic lighting using OpenGL.
8/26/2026 20:53:08	nayeem2107050@stud.k	2107050	Interactive 3D Vending Machine	An interactive 3D vending machine featuring multiple products, animated dispensing mechanisms, rotating product spirals, moving products, an opening collection door, interactive selection buttons, and dynamic indicator lights. The project demonstrates 3D transformations, hierarchical motion, animation, camera control, and dynamic lighting.
8/26/2026 22:51:58	jony2107119@stud.kuet.	2107119	Hot Air Balloon — A Floating 3D Sky Scene	A hot air balloon slowly rises through the sky, with the basket gently swaying back and forth on a pivot connected to the balloon.
8/26/2026 23:30:07	patwary2107043@stud.k	2107043	3D Automatic Car Wash	A 3D car wash scene featuring a car entering a washing station, rotating cleaning brushes, water spraying, etc.
8/27/2026 0:30:51	hossain2107066@stud.k	2107066	3D Water-Powered Blacksmith Workshop	The project deals with a water wheel driving a cam shaft and trip hammer through a nested transformation chain, a heated iron bar that glows and cools as its own moving light source, and a forge environment lit by fire, window daylight and the bar itself by light effects
8/27/2026 9:08:59	rahman2107058@stud.k	2107058	Sundarbans Nightlight: A Living-Light Illumination Study	A Sundarbans-inspired firefly-lit mangrove creek where each firefly acts as a real point light, showcasing every core transformation and lighting concept — translation, rotation, hierarchy, attenuation, emission, and a live Flat/Gouraud/Phong comparison — in one cohesive nighttime scene.
8/27/2026 11:22:31	alifsalek.as@gmail.com	2107026	3D virtual innovation hub	It would be a 3D center where multiple items will be visualized in 3d mode
8/27/2026 11:53:27	ankonroy31416@gmail.c	2107113	Nautilus: Interactive 3D Submarine Explorer [37]	A submarine explores a dark underwater world. The player controls the submarine's movement — forward, reverse, turning, and diving. A bright headlight on the submarine cuts through the darkness, lighting up the sea floor ahead. Two camera views are available: one follows the submarine from behind, and another puts the player inside the cockp
8/27/2026 12:24:23	hasan2107036@stud.ku	2107036	Crane Dynamics	A construction crane lifts and moves a load using rotational and translational transformations.
8/27/2026 13:47:58	ghosh2107097@stud.ku	2107097	Pyramid at Giza: Construction Site	A large-scale 3D OpenGL visualization of the Great Pyramid of Giza actively under construction — a quarry, procedural ramps, rope-and-lever sledge teams hauling blocks, and the pyramid rising course by course, with instanced worker crowds and a moving desert sun for dynamic shadows. Demonstrates hierarchical transformations, procedural ge
8/27/2026 16:12:56	sheikh2107035@stud.ku	2107035	Rickshaw Puller Under a Street Lamp	A rickshaw moves along a street lit by a single overhead lamp — a quiet everyday image of urban Bangladesh, showing how a moving point light changes shading on a moving object in real time.
8/27/2026 21:04:55	chakma2107121@stud.k	2107121	Underground Metro Station	A 3D underground metro station, featuring platforms, tunnels, tracks, escalators, lights, and a moving metro train. The train arrives, stops, opens its doors, and departs while escalators and fans remain animated. The project demonstrates 3D transformations, hierarchical transformations, animation, and ambient, diffuse, and specular lighting with P
8/28/2026 10:48:28	islam2107048@stud.kue	2107048	Rainy Night City Bus Stop with Dynamic Lighting and Wet-Surface Reflection	A simple 3D rainy night bus stop scene in OpenGL featuring a shelter, bench, streetlight, and falling rain particles. The project demonstrates core 3D transformations (translation for rain, rotation for an umbrella/signboard), animation, and Phong lighting with a streetlight spotlight and wet-surface reflections.
8/28/2026 13:01:21	basher2107078@stud.ku	2107078	Dracula's Castle: An Interactive 3D Environment with Dynamic Lighting and Hierarchical Transformations	This project aims to develop an interactive 3D environment inspired by Dracula and his Gothic castle. The project will focus on fundamental computer graphics concepts, particularly 3D transformations and lighting techniques. The scene will incorporate translation, rotation, scaling, hierarchical transformations, and dynamic lighting to create a rea
8/28/2026 15:50:27	tania2107057@stud.kuet	2107057	Walking on a Tiny Planet: A 3D Gravity-Based spherical tiny World	An interactive 3D world where players explore a spherical planet with gravity always pulling toward its center, featuring landscapes, a dynamic day/night cycle, and an immersive space environment.
8/28/2026 23:06:24	biswas2107013@stud.ku	2107013	AlpineLink: Interactive 3D Cable Car Resort [38]	An interactive 3D mountain resort where cable cars move between stations with dynamic pulley rotation, Bezier-path motion, textured environments, realistic lighting, and free camera exploration. [39]
9/13/2026 19:20:01	banik2107052@stud.kue	2107052	Academic Building and Its Surrounding Environment [40]	A scene representing the front view of our academic building and its surrounding environment. The scene will include the main academic building, a road in front of the building, trees, and a vehicle passing along the road. [41]
8/30/2026 23:53:34	faisal833194@gmail.con	2107061	Clockwork Serenade: An Antique Music Box Simulation	A 3D OpenGL music box scene where a rotating brass cylinder plucks metal tines as it turns, a hinged lid opens to reveal a dancing figurine animated through hierarchical joints, and a single candle-lit point light demonstrates Phong shading across brass, wood, and glass materials.
9/1/2026 2:03:14	tusharkumarroy.dev@gm	2107037	Rocket Launch & Satellite Deployment	A 3D OpenGL simulation where a rocket launches from Earth carrying a satellite. The rocket moves upward into space, deploys the satellite, and the satellite then begins orbiting Earth.
9/1/2026 12:17:55	hamim2107106@stud.ku	2107106	My Home — An Interactive 3D House Walkthrough	An interactive 3D OpenGL recreation of my own home, featuring multiple connected rooms, furniture, and a day-night lighting cycle. Users can walk through the house using camera controls.
9/1/2026 15:24:33	sadidsiddiquev7@gmail.	2107094	3D Rubik's Cube	Rotate individual cube layers interactively
9/1/2026 20:09:54	mahim2107020@stud.ku	2107020	Medieval Field Cannon: Wheeled Movement, Barrel Elevation & Recoil	A 3D OpenGL model of a medieval field cannon mounted on a wheeled carriage. The cannon can be moved forward/backward with the wheels rotating to match the distance traveled, and the barrel can be elevated to a chosen angle about its pivot. Firing launches a cannonball along a projectile-motion arc while the barrel recoils and springs back.
9/3/2026 19:56:05	khansiyam216@gmail.cc	2107120	3D Wind-Driven Candle Flame Simulation	This project presents a 3D indoor scene featuring a candle placed near an open window. Air enters through the window and creates a wind effect that influences the candle flame. As the wind speed changes, the flame bends, flickers, and changes its size and intensity. A nearby curtain can also move according to the airflow, making the wind effec
9/4/2026 19:47:28	moin2107111@stud.kuet	2107111	3D Kinetic Marble Machine / Rube Goldberg Machine	An interactive 3D marble machine where a moving marble passes through ramps, rotating gates, lifts, loops, and moving platforms, demonstrating 3D transformations, lighting, and shading.
9/4/2026 20:21:22	zihad2107071@stud.kue	2107071	Flight Simulator	You drive a aircraft above a procedural generated landscape
9/4/2026 20:34:28	shakibuzzaman2107069	2107069	3D Minimalist Museum Room with Floating Sculpture	An interactive 3D museum room built with Python and OpenGL, featuring a floating, rotating metallic sculpture on a pedestal. It demonstrates 3D transformations, interactive camera controls, and keyboard-controlled orbiting light showcasing real-time Phong specular highlights.
9/5/2026 0:45:13	nath2107083@stud.kuet	2107083	Lathe Turning: A 3D OpenGL Study in Dynamic Scaling and Specular Materials	A 3D OpenGL lathe: a spinning steel bar is cut down to a smaller diameter as the tool carriage travels along it, with the workpiece geometry rescaled live inside the render loop. Mirror-bright machined steel against dull uncut stock makes specular reflection and Phong shading unmistakable under a single movable work lamp. [42]
9/6/2026 2:31:17	hasan2107067@stud.ku	2107067	Tesseract	A 3D scene full of glowing, moving lights that you can either sit back and watch, or jump in and control yourself.
9/6/2026 23:19:39	haque2107096@stud.ku	2107096	Arrakis	A scene imagined from Frank Herbert's award winning sci-fi novel series 'Dune', showing an ornithopter of the House Atreides observing a Spice Harvester belonging to them, harvesting onwards the spice-rich sand dunes of Arrakis for Spice Melange. Much to not their notice, an impending danger looms in the distance as a thumper goes off on th
9/7/2026 23:50:56	hossen2107003@stud.ku	2107003	Overhead Water Tank & Automatic Float-Valve System.	
9/9/2026 3:16:15	noman2107105@stud.ku	2107105	Indoor Games Room of SWC.	A simple scene of the indoor games room of SWC. There will be some moving objects, lighting and other required objects.
9/9/2026 11:45:14	mahi2107076@stud.kuet	2107076	NightWatch [43]	NightWatch is an integrated pipeline demonstrating the intersection of 3D computer graphics and digital image processing. A custom OpenGL engine generates a hierarchical, procedurally modeled nighttime compound, complete with multi-source light attenuation, Bézier-curve motion paths, and custom projection matrices. Rather than rendering
